SUBJECT:

INTRODUCTION TO STRUCTURES
DESIGN ADVISORIES

CODE: 94-001

DATE:
11/21/94

APPROVED BY:

SUBJECT CODE: 7.35-4

SUPERSEDES:
NONE

Represented here is a new form for communication from the Structures Division entitled STRUCTURES DESIGN ADVISORY, abbreviated as SDA.

The purpose of the SDA is to provide a systematic means of transmitting information on structural engineering practices that relate to bridge design or construction. SDA's are intended to provide technical applications guidance or interpretation of the provisions of the NYSDOT Bridge Design Specifications, Standard Specifications and Engineering Instructions. While SDA's are not to be considered as substitute documentation of these specifications or DOT policies in general, they may at times describe preferred NYSDOT engineering practices. In some cases SDA material may later be incorporated into official Structures Division manuals.

The "Code" box will contain the last two digits of the year issued plus a three digit SDA issue number. Revisions to SDA's will be issued with the year and SDA number that it supersedes in the "Supersedes" box in the heading.

Issuance of all SDA's will be from the Structures Division. A normal issuance to the Regions will consist of copies to the Regional Director, the Regional Design Engineer and Regional Structures Engineer. Issuances will also be sent to all Consultant Engineers on the Department's current mailing list. The Construction Division and Regional Construction Engineers will be copied if appropriate.

Suggestions for possible issuance of a SDA are encouraged and should be made to the Structures Division.
